

General Computer Troubleshooting Tips – Offered by Taleam Systems

Taleam Systems is a computer business in Ottawa, ON that provides professional technology support to government, businesses, non-profit and schools. We have been around since 2011. We are offering a FREE online tutorial to help people interested in learning more about general computer troubleshooting tips.

This tutorial will cover the following topics:

The control panel

- The control panel is probably the most important feature that Microsoft Windows 10 offers. This where you can see the software that are on your computer. You can also use this file system to un-install a software that you no longer need and to free up additional space on your computer.

Wireless internet connection

- The Wi-Fi icon on the bottom right corner is your wireless internet connect. You have the option to click on it and see which Wi-Fi you are connected to. You can also view your Wi-Fi password here and connect more devices.

Command Prompt (CMD)

- The command prompt is used to filter out your internet connection and cache. You can try using the commands such as: ipconfig/flushdns to clear the cache.
- You can also use this command: ipconfig/renew which will renew your IP address.

General website HTML tips

- Although, we can't cover this topic in detail, but it is an important skill that you should know if you have a website for business. We offer website design services, software and general tips. Contact us for more info at www.taleamsystems.com
- Some commonly used html codes include: <p>, <title>,
 and a lot more...

Google chrome features explained

- You want to make sure that Google chrome is regularly updated so that you can get all the updates and to stay secure on the internet.
- Make sure to install the latest version of Google chrome. You can do so by visiting https://www.google.com/intl/en_ca/chrome/
